

Meerkat

Every personal app. Five intelligent loops. One private hub. \$5 a year. Meerkat consolidates Strava, MyFitnessPal, AllTrails, YNAB, Flo, Day One, Rocket Money and dozens more into five workflow loops that share one database, one subscription, and zero ads. Data syncs phone-to-phone before it ever touches a server.

5 loops, not dozens of apps

Health & Fitness, Home & Life, Mind & Growth, Social & Community, Money & Planning. Data flows across categories within each loop.

Local-first. Zero analytics.

All data in one encrypted file on-device. No third-party SDKs, no ad networks. Anti-enshittification pledge signed in code.

Cross-category intelligence

Workouts, mood, nutrition, cycle, and sleep share one database. Insights that are trivial for Meerkat are impossible for any single-purpose app.

Health & Fitness

Strava · MyFitnessPal · AllTrails · Surflin · Hevy · Sleep Cycle · Flo · Headspace · Medisafe

Home & Life

HomeZada · Planta · Partiful · Yelp · OfferUp · Whering

Mind & Growth

Day One · Daylio · Otter.ai · Evernote · Quizlet · Goodreads · Finch

Social & Community

BeReal · Discord · ProtonMail · SofaScore

Money & Planning

YNAB · Monarch · Rocket Money · Honey

What competitors charge

MEERKAT REPLACES ALL FOR \$5/YR

COMPETITOR	CATEGORY	PRICE/YR	REVENUE	USERS
Strava	Trails + Workouts	\$80	\$415M	135M
MyFitnessPal	Nutrition	\$80	\$310M	220M
Headspace	Mood	\$70	\$348M	100M
Flo Health	Cycle	\$50	\$275M	77M
YNAB	Budget	\$109	~\$100M	~2M paid
Evernote	Notes	\$130+	~\$100M	250M
AllTrails	Trails	\$36	\$38M	60M
Quizlet	Flash	\$48	\$96M	60M
Meerkat	All of the above	\$5	-	-

Users stacking these apps pay \$500+/yr. Meerkat replaces them all for \$5 (99% less). At \$1/mo, conversion rates should exceed the 5-6% benchmarks set by competitors charging 10-20x more.

THE ASK

\$1.5M

Seed · 10% equity · \$15M pre-money · 24 months of runway

Funds hire a core team, launch a 50-city marketing campaign, complete mesh sync, and reach profitability. Founder retains 70%+ ownership. Investors receive 10% of the business.

13%

Founder comp (\$187.5K / 24 mo)

25%

Sr. engineer (\$375K / 24 mo)

20%

Marketing (\$300K)

10%

Legal + compliance (\$150K)

7%

Design (\$100K)

25%

Infra + reserve (\$387.5K)

Revenue projections

1/1,000 EXPECT · 1/500 GOAL · \$5/YR (\$1/MO)

SCENARIO	CAPTURE RATE	TOTAL USERS	PAID (5%)	ARR @ \$5/YR
Year 1 (expectation)	1 in 1,000 each	1.31M	65.5K	\$328K
Year 2 (goal)	1 in 500 each	2.62M	131K	\$655K
Year 3 (plan)	1 in 250 each	5.24M	262K	\$1.31M
Year 3 (bull)	1 in 100 each	13.1M	655K	\$3.28M

Conservative: same 5% conversion at \$5. At this price point, conversion likely reaches 8-10% (impulse-buy threshold), which would push Year 2 ARR to \$1.05M-\$1.31M. The \$5 price also eliminates the #1 objection to paid apps.

Investor return model

PREFERRED RETURN · ACCELERATED PAYBACK · PERPETUAL PROFIT SHARE

Meerkat is not building to flip. We pay investors back quickly, then share profits indefinitely. Your return comes in three phases.

PHASE 1: PAYBACK

Get your money back

75% of profit to investors until \$1.5M returned.
Founder takes salary only.

PHASE 2: DOUBLE IT

2x return on investment

Accelerated distribution continues until
investors receive \$3M total.

PHASE 3: PERPETUAL

10% of profits, forever

After 2x returned, investors collect 10% of
annual profit indefinitely.

HOLDER	OWNERSHIP	MILESTONE	AT 1/1,000	AT 1/500
Founder	70%+	Year 1 ARR	\$328K	\$655K
Seed investors (this round)	10%	Investor payback (75%)	\$111K	\$221K
Future rounds / team pool	20%	1x returned (\$1.5M)	~Year 4	~Year 3
		2x returned (\$3M)	~Year 6	~Year 4
		10% of profit/yr after	\$131K+	\$262K+

Lower price, higher volume. At \$5/yr the conversion barrier nearly disappears. If conversion hits 8% instead of 5%, Year 2 ARR reaches \$1.05M and payback accelerates by a full year. Margins stay high because local-first means near-zero per-user cost.

Why margins are structurally high: Meerkat runs on the user's device. No per-user cloud cost, no data warehouse, no ML inference bill. Every competitor (Strava, MFP, Flo, YNAB) runs massive server farms. We do not. More users does not mean more servers.
